

EOC NEW USER GUIDE

Setup, menus, reports, automation controls, and everyday operation

Version 1.0 GA | X4: Foundations 9.0+

The short version

Install EOC, load your save, open EOC from the Extension Options menu, assign a role to each station, run Analyze Now, and review the Executive Advisor. Automation remains under your control.

Contents and the EOC workflow

- 1. Install and confirm startup
- 2. Open EOC and read the dashboard
- 3. Assign station roles
- 4. Analyze the empire
- 5. Read cases, reports, and Tips
- 6. Use operational remediation
- 7. Choose trade-order control
- 8. Register and assign ships
- 9. Understand notifications and safety
- 10. Troubleshooting and a recommended routine

How EOC thinks

OBSERVE	DIAGNOSE	RECOMMEND	TEACH	ACT	VERIFY
---------	----------	-----------	-------	-----	--------

EOC builds an evidence history instead of treating one snapshot as proof. It identifies repeated shortages, overflow, workforce problems, station-health decline, logistics gaps, and other blockers. It can explain the corrective action, and selected capabilities can act only after the player chooses the relevant operating mode.

Player control	EOC does not buy ships or blueprints. Ship assignment and managed trade orders are separate controls and can be disabled later.
----------------	---

1. Install and confirm startup

Steam Workshop installation

- Subscribe to EOC - Executive Operations Center on Steam Workshop.
- Allow Steam to finish downloading the Workshop item.
- Start X4 and confirm EOC is enabled in Extensions.
- Load an existing save or begin a new game. EOC is designed to preserve station-role data in the save.

Manual installation

- Extract the EOC folder into the X4 extensions folder.
- Do not nest the extension inside an extra directory. The extension's content.xml must be directly inside its own extension folder.
- Restart X4 after installing or replacing the files.

Confirm it loaded

After the save loads, open Player Information > Logbook > Ticker. Look for the EOC startup entry. The GA release identifies itself as EOC 1.0 GA. A startup line proves the extension initialized; it does not by itself prove that every station has been classified.

Compatibility	The current GA release requires X4 9.0 or newer. X4 8.0 can produce null values because it cannot parse two 9.0 Mission Director constants.
---------------	---

2. Open EOC and read the dashboard

Open Extension Options and choose EOC. The dashboard is the empire-level triage screen:

- CRITICAL CASES - stations needing immediate review.
- WARNING CASES - developing or recurring concerns.
- STATIONS REQUIRING ACTION - the working list of stations with something the player should review.
- BROWSE ALL STATIONS - inspect the complete station directory.
- OPEN EXECUTIVE ADVISOR - enter the main analysis, report, role, remediation, and control workflow.

Numbers are navigation

Selecting a case count opens the matching list. A zero is good news, not a broken menu.

3. Assign station roles first

Station roles tell EOC what a station is supposed to accomplish. Without that context, EOC can observe symptoms but cannot make strong role-aware recommendations.

From Executive Advisor choose STATION ROLE ASSIGNMENT. The focused workflow lists every player station with its current role. Select a station, choose the closest operational role, save, and EOC returns to the same place in the list.

Role	Use it for
Shipyard / Wharf	Stations producing ships
Defense	Defensive or strategic military stations
Factory	General production complexes
Mining Hub	Resource collection and mineral/gas distribution
Trading Hub	Ware distribution and commercial logistics
Food	Food and workforce-supply production
Technology	Advanced component and technology production
Headquarters	Player HQ or executive hub
Hybrid	Stations with several equally important purposes

Finished state

When every station is classified, Undefined Roles reports 0 and role-assignment reminders disappear. You can still reopen the workflow to change a station's role.

4. Executive Advisor and analysis

- STATION ROLE ASSIGNMENT - classify or reclassify stations.
- OPEN SELECTED STATION ADVISOR - inspect the currently selected station.
- REPORT: OPERATIONAL REMEDIATION - generate the evidence-based remediation report.
- ANALYZE NOW - run a fresh empire analysis immediately.
- REPORT: GENERATE EMPIRE EXECUTIVE REPORT - create the broad empire report in the Tips log.

Use Analyze Now after major changes: assigning roles, completing modules, adding ships, changing logistics, or resolving a reported shortage. Continuous observation still runs in the background, but Analyze Now gives the player a clear checkpoint.

Ticker feedback	EOC announces when analysis starts and completes. Wait for the completion entry before judging the new case totals.
------------------------	---

5. Understand cases, reports, and the Tips log

A case is evidence that needs review. It is not always proof of a single root cause.

Level	Meaning	What to do
Critical	Immediate operational concern or severe repeated problem	Open the station's Advisor report first
Warning	Developing, recurring, or lower-severity concern	Review evidence and monitor trend
Action	A station has a concrete recommended next step	Read recommendation, then decide whether to act

Reports are written to Player Information > Logbook > Tips. Multi-page reports are written in reverse creation order so Page 1 appears first to the player. The final page is marked END OF REPORT.

- Read Diagnosis for what EOC believes is happening.
- Read Evidence for samples, quantities, station state, and confidence.
- Read Recommendation for the capability-level correction.
- Read Player instructions when EOC is not authorized to perform the change.
- Read Verification to see whether EOC is waiting, monitoring, or considers the issue resolved.

6. Operational remediation

Operational remediation turns repeated observations into a tracked problem-solving cycle. The status page separates open or escalated cases, cases being verified, and resolved cases. Each retained case has an EOC identity so later observations can be correlated with the original problem.

- OPEN - evidence supports a current problem.
- VERIFYING - a corrective change occurred and EOC is watching the result.
- RESOLVED - subsequent observations show the condition cleared.
- ESCALATED - the first recommendation did not resolve the issue or evidence worsened.

Do not chase one sample

EOC is designed to recommend remediation from repeated, complete, medium/high-confidence evidence. A temporary shortage may clear without intervention.

7. Managed trade orders

EOC can either teach the player what to change or manage supported buy/sell offers. This choice is separate from ship assignment.

Mode	Behavior
Instructions only / disabled	EOC diagnoses and explains; it does not change trade offers.
Managed trade orders enabled	EOC may create or adjust supported buy/sell offers where evidence indicates a blocker, then verifies t
Disable later	Stops future EOC trade-order management. Player decisions remain authoritative.

The original engineering proof used a one-unit temporary offer. GA does not hard-code one unit: buy offers use target stock minus current stock; sell offers use current stock minus target stock. X4's station manager decides individual shipment sizes.

Persistent choice	Your selected managed-trade setting is intended to remain in the save. Confirm the startup ticker and the trade-order status after loading.
--------------------------	---

8. Shipping control: choose the trust level

- DISABLED / INSTRUCTIONS ONLY - EOC recommends ship capability but assigns nothing.
- APPROVAL REQUIRED - EOC presents the exact ship, station, and role; the player authorizes each assignment.
- AUTO-ASSIGN REGISTERED SHIPS - EOC may automatically use ships that the player explicitly registered and that match a verified station need.
- REGISTER SUITABLE UNASSIGNED SHIPS - scans player property and registers supported, genuinely unassigned candidates.

Important boundary

EOC does not take every ship you build. Auto-assignment applies to registered candidates and verified needs. Drones, units, XS craft, current-player ships, mission/quest-controlled ships, combat-purpose ships, and already assigned ships are excluded.

9. Approve a ship assignment

In Approval Required mode, REVIEW RECOMMENDED SHIP ASSIGNMENT opens the proposal. Read all three fields before authorizing:

- SHIP - the exact candidate EOC intends to use.
- ROLE - the X4 commander assignment, such as Trade for Commander.
- STATION - the exact receiving station.

Choose AUTHORIZE THIS ASSIGNMENT only when the pairing is acceptable. Choose BACK - NO CHANGE to leave the ship untouched. EOC will not interpret backing out as approval.

10. Confirm that the assignment worked

A successful action produces immediate ticker feedback naming the ship, station, and commander role. EOC then monitors the result.

Independent confirmation in the Property view

The property list provides independent visual confirmation: the ship should disappear from Unassigned Ships and appear under the station or its subordinate structure.

Pass condition	Ticker reports ACTION COMPLETE, the exact ship is no longer unassigned, and its X4 assignment is attached to the intended station.
-----------------------	--

11. A simple everyday operating routine

After load	Confirm the EOC startup line in Ticker.
Classify	Keep Undefined Roles at 0; classify new stations as they are built.
Analyze	Run Analyze Now after major empire changes.
Triage	Open Critical first, then Warning, then Stations Requiring Action.
Read	Use the station Advisor and Tips reports for diagnosis, evidence, and instructions.
Act	Follow instructions or use a separately enabled managed capability.
Verify	Allow observation cycles to determine whether the condition cleared.
Review controls	Periodically confirm managed trade and shipping modes still match your preference.

When something looks wrong

- Null values on X4 8.0: the current GA requires X4 9.0+.
- No ship registered: confirm it is player-owned, unassigned, supported, operational, and has suitable cargo capability. A ship can remain unassigned simply because no station currently needs it.
- A mod-added ship is ignored: EOC intentionally avoids dependencies and hard-coded definitions for other mods. Unsupported candidates remain untouched.
- No report visible: open Player Information > Logbook > Tips and look for the newest EOC report pages.
- Counts did not change: wait for Analysis Complete or run Analyze Now after the game state has settled.

Save safety	EOC's player choices and station roles are stored with the game. As with any modded game, keep normal rotating saves before major mod or game-version changes.
--------------------	--

12. Quick-reference menu map

Dashboard	Critical Cases Warning Cases Stations Requiring Action Browse All Stations Open Executive Advisor
Executive Advisor	Station Role Assignment Open Selected Station Advisor Operational Remediation Report Analyze Now Empire Executive Report
Reports	Player Information > Logbook > Tips; read Page 1 first and continue to END OF REPORT
Trade control	Instructions only or managed trade orders; disable later whenever desired
Shipping control	Disabled Approval Required Auto-Assign Registered Ships
Evidence	Player Information > Logbook > Ticker for startup, actions, completion, warnings, and confirmations

Best first session

1) Confirm startup. 2) Assign all station roles. 3) Run Analyze Now. 4) Generate the Empire Executive Report. 5) Read Critical cases. 6) Leave automation disabled until the reports make sense to you. 7) Enable one managed capability at a time.

EOC - Executive Operations Center

Advisor. Intelligence. Control. Observe. Diagnose. Recommend. Act. You stay in control; EOC works for you.
